

Product Code . EDS-MM-10822

Atom Molecular Models Set

Description

Material: PP (atom), LDPE (connecting key), ABS (packing box)

Basic colors for atoms: White, red, black, grey, light blue. (also offer customized colors.)

A full range of molecular models with domestic standard and international standard.

Teaching instrument such as molecular models, crystal models

Basic colors for connect chain: White, purple, grey, light blue. (also offer customized colors.)

This is a brand Jainco Export and excellent molecular model set.

Jainco Export, Your molecular model set will bring to life such concepts as stereoisomerism and conformational analysis, and help you relate the physical and chemical properties of compounds to their molecular structures.

It can be easily build molecular models for aliphatic and aromatic hydrocarbons, alcohols, aldehydes, ketones, carboxylic acids, esters, ethers, amines, amides, halogen compounds, sugars, fats, amino acids, alkaloids and representative of most other families of organic compounds.
